

The E800A is an inline radial insertion machine that automatically insert tape-packed components onto the PCB. It provides automatic PCB transfer and automatically inserts components supplied on tape into printed circuit boards (PCBs). The radial machine E800A brings a new level of productivity to radial component sequencing and insertion, offering consistently high throughput regardless of component type. It addresses a full range of radial component insertion, including capacitors, transistors, transistors, LEDs, key switches, resistors, connectors, coils, potentiometers, fuse holders, fused wires, etc. The machine enhances efficiency in component insertion and the quality of PCBA products.

Email: info@smtglobe.com Tel: +86 13181197750

- ◆ Industry's highest real throughput, CPH of 24,000
- ◆ World-class PPM 300
- ◆ Multiple clinch options
- ◆ Single, dual, triple, and quad-span tooling
- ◆ Expandable feeder station
- ◆ SMEMA compatible.
- ◆ MES compatible.
- ◆ Servo-driven insertion head.
- ◆ Supports windows 10.

Welcome inquiry

1, Please visit : www.smtglobe.com

2, Welcome to our factory in China

3, Looking forward to your email: info@smtglobe.com
