

Description

Discover the ultimate in SMT Reel Tape Splicing Machines with our versatile models that support various material tapes and reel tape dimensions. Our machines are equipped with advanced features such as automatic detection of empty pockets, wireless scanning barcode checking, and compatibility with MES systems for unparalleled traceability. With the ability to splice and seamlessly integrate new tape, our SMT Reel Tape Splicing Machines are designed to optimize your production line. Explore the full range of functions and elevate your SMT production process today!

Features

- Basic function
- Pre stripping function
- MES docking
- Automatic tape recovery
- Autoinduction scissors tic
- Paper tape general purpose
- Automatic identification spacing
- CCD empty material detection

The knurled gear is used to peel the covering film at the front end of the material belt, which is convenient for the smooth tearing of the covering film of the material belt.

Paper tape with different thickness can tear the covering film smoothly

Plastic tape, covering film can be torn off smoothly

If there is no pre stripping mechanism, the strip film will break or cannot be torn

- Automatic material receiving replaces manual material receiving, which has a higher probability of passing and improves the equipment transfer rate.
- Automatic verification replaces manual verification, which does not require manual sampling and measurement, which is more foolproof and more efficient.
- Reduce the labor intensity of employees, reduce the production process of customers, and improve the work efficiency of employees.
- Reduce management costs, staff turnover, increase automation, do not rely on labor, and the material receiving status is unified.
- Control the risk of wrong material in the last kilometer and confirm it one second before receiving.
